

Write a Python program to create a scatter plot of Age and Height of 5 students

```
import matplotlib.pyplot as plt
```

```
import matplotlib.pyplot as plt

# Data
age = [12, 14, 13, 15, 12]
height = [150, 165, 158, 172, 148]

# Plot
plt.scatter(age, height, color='blue')
plt.title('Age vs Height of Students')
plt.xlabel('Age (Years)')
plt.ylabel('Height (cm)')
plt.show()
```

Write a Python program to create a bar chart showing marks of 5 students.

```
import matplotlib.pyplot as plt

# Data
students = ['Alice', 'Bob', 'Charlie', 'David', 'Emma']
marks = [85, 92, 78, 65, 88]

# Plot
plt.bar(students, marks, color='skyblue')
plt.title('Student Marks')
plt.xlabel('Student Name')
plt.ylabel('Marks')
plt.show()
```

Write a Python program to create a histogram showing the distribution of marks of 10 students

```
import matplotlib.pyplot as plt

# Data
```

```
marks = [55, 68, 72, 75, 81, 85, 88, 90, 93, 98]
```

```
# Plot (bins divide the mark ranges)
plt.hist(marks, bins=5, color='lightgreen', edgecolor='black')
plt.title('Distribution of Student Marks')
plt.xlabel('Marks Range')
plt.ylabel('Frequency')
plt.show()
```

Write a Python program to create a pie chart showing the number of students in different courses.

```
import matplotlib.pyplot as plt

# Data
courses = ['Python', 'Java', 'Data Science', 'Web Dev']
students = [45, 30, 25, 20]

# Plot
plt.pie(students, labels=courses, autopct='%1.1f%%', startangle=90)
plt.title('Student Enrollment by Course')
plt.show()
```

Student Enrollment by Course

Write a Python program to create a bar chart showing sales of 5 different products.

```
import matplotlib.pyplot as plt

# Data
products = ['Laptops', 'Phones', 'Tablets', 'Headphones', 'Monitors']
sales = [150, 230, 90, 180, 110]

# Plot
plt.bar(products, sales, color='orange')
plt.title('Product Sales Overview')
plt.xlabel('Products')
plt.ylabel('Units Sold')
plt.show()
```

Product Sales Overview
