

Practical – 2

Roll No. : 48	Name: Kaushal Yadav
Class : SYBS .c IT	Date/Time of Submission: 22-07-2026

2a. Write a python code to create nested tuples.

Code:

#Tuple

```
thetuple = ("Kaushal yadav", "Amit", "Ram", "Kaushal", "Sunny")
```

```
print(thetuple)
```

```
print("Kaushal yadav==48")
```

```
#Tuple
```

```
thetuple = ("Kaushal yadav", "Amit", "Ram", "Kaushal", "Sunny")
```

```
print(thetuple)
```

```
print("Kaushal yadav==48")
```

Output:

```
('Kaushal yadav', 'Amit', 'Ram', 'Kaushal', 'Sunny')  
Kaushal yadav==48
```

2b. Write a python code to sort the nested tuple using sorted () function

Code:

Sorted

```
data = ["Kaushal", "Aman", "Jay"]
```

```
sorted_data = sorted(data, key=lambda x: x[1])
```

```

print(sorted_data)
print("Kaushal Yadav==48")

# Sorted
data = ["Kaushal", "Aman", "Jay"]

sorted_data = sorted(data, key=lambda x: x[1])

print(sorted_data)
print("Kaushal Yadav==48")

```

Output:

```

on2b.py
['Kaushal', 'Jay', 'Aman']
Kaushal Yadav==48

```

2c. Write a python code to copy or clone a list.

Code:

```

list1 = ["Yadav", "Kaushal", "Jay"]

list2 = list1.copy()

print("Original List:", list1)

print("Copied List:", list2)

print("Kaushal====48")

```

Output:

```
Original List: ['Yadav', 'Kaushal', 'Jay']  
Copied List: ['Yadav', 'Kaushal', 'Jay']  
Kaushal=====48
```

2d. Write a python code to check the immutability property of python tuples.

Code:

```
my_tuple = ("Yadav", "Kaushal", "Ji")  
  
my_tuple[1] = "kaushal"  
  
print(my_tuple)  
  
print("Kaushal yadav==48")
```

Output:

```
Traceback (most recent call last):  
  File "C:/Users/IT-46/AppData/Local/Programs/Python/Python314/practical python2  
b.py", line 3, in <module>  
    my_tuple[1] = "kaushal"  
TypeError: 'tuple' object does not support item assignment
```
